**4.DLS-DGGD64 model Hydrostatic pressure test machine for cylinders**

After the cylinder is filled with water, the hydraulic pressure test is carried out. The water pressure test machine pressurization device is connected to the bottle, and the pressure is increased to the pressure required for hydrostatic pressure testing.

1. Driven air pressure: 3bar-8bar
2. Test pressure: 128bar-512 bar ( pressure is adjustable)
3. Each test pressure bottle number: 1
4. Holding time: 5 min
5. The user needs to fill empty cylinder with water first, then start pressurization with this machine

The size of the machine is 500\*450\*520mm
